

# A storage container caught fire on the highway

How did a container fire end?

The fire was finally extinguished after three hours by firefighters, and no one was injured in the incident. In order to prevent the ashes from rekindling in the container, the fire department contacted the workers in the container terminal to lift the container with a crane, and then dumped the burned goods in the container to the ground.

What happened in the Hong Kong fire container?

It is reported that the fire container contained a batch of lithium batteries and LED lights that had arrived in Hong Kong from Vietnam and was about to be shipped to the mainland. After investigation, it was believed that the state of the lithium batteries was unstable, and there was a short-circuit fire during storage.
