What is the outlook for solar in the US?

Our annual Year in Review report includes extended 10-year outlooks for every segment. The total US solar fleet is expected to nearly quadruple from 177 GWdc installed at year-end 2023, to 673 GWdc installed by 2034. By 2040, solar is expected to make up the largest share of electric generating capacity in the US.

How much solar capacity did the US solar market install in 2023?

Key figures In 2023, the US solar market installed 32.4 GWdc of capacity, a remarkable 51% increase from 2022. This was the industry's biggest year by far, exceeding 30 GWdc of capacity for the first time.

Who are the best solar companies in the United States?

Operating out of California, Auxin Solar is one of the few manufacturers producing solar modules entirely in the United States. They are known for their advocacy for fair trade and have been involved in policy debates concerning solar tariffs. 11. Crossroads Solar Crossroads Solar stands out not just for its products but also for its mission.

Which state has the most solar panels installed in 2023?

Texas beat California to claim the top spot for solar capacity installed in 2023. This is only the second time that Texas has outranked California for annual installations, which also happened in 2021. This is being driven by utility-scale installations in Texas, which amounted to nearly 4 GWdc in Q4 2023 alone.

How much solar power will the US have by 2040?

The total US solar fleet is expected to nearly quadruple from 177 GWdc installed at year-end 2023, to 673 GWdc installed by 2034. By 2040, solar is expected to make up the largest share of electric generating capacity in the US. In this report, we have also included our alternative scenarios (a Bull case and a Bear case).
