KONA ENERGY LIMITED - Free company information from Companies House including registered office address, filing history, accounts, annual return, officers, charges, business activity

Kona Energy has been providing engineering services on energy such as low and medium voltage systems, renewable energy solutions, power cables since 2018.

Kona Energy has outlined seven proposals in its Connection Reform consultation response. While the Clean Power 2030 ambition is commendable, Kona Energy believes that achieving this goal within the current framework is unrealistic and risks undermining investor confidence and the UK's broader energy security.

In this paper, four leading energy storage companies set out policy solutions that can cut constraint costs. If implemented, these will allow ESO to use low carbon technology to increase flows of renewable power across constrained boundaries, saving consumers money.

Kona Energy CEO Andy Willis has issued an open letter urging the UK Government, National Energy System Operator (NESO), Ofgem, and the Department for Energy Security and Net Zero (DEZNEZ) to ensure critical energy projects are not jeopardised by the misalignment of the Capacity Market (CM) and proposed connection reforms.

UK's Kona Energy has obtained approval from the Scottish government for its 228MW Smeaton battery energy storage system (BESS) project. Located near Dalkeith in East Lothian, the project will bolster the UK's renewable energy capabilities and grid stability.

It is likely that cars with internal combustion engines will not exist in Australia by 2050. However an all-electric car fleet at current driving patterns would require close to Australia's current renewable energy output. A car such as the Kona, driving average km, would use less than 10% of its fully charged capacity, so

Kona Energy is one of the UK's leading clean energy development companies. The company is focused upon developing grid-scale battery energy storage projects. These flexible assets are key to balancing energy supply and demand and increasing the utilisation of renewable power on the electricity system.
