

We are excited to share with you the partnership of Costa Rica Solar Solutions (CRSS) and NEC Energy Storage Solutions (NECES). This will give CRSS clients the possibility of lower or eliminating the demand charge from the electric companies in Costa Rica by peak shaving and load shifting using energy storage.

The companies Proquinal - a member of the Spradling Group - and Swissol, accompanied by government authorities, inaugurated the largest and most innovative project in storage of alternative energy in Costa Rica, which will reduce the pressure on public electricity generation and also contribute to the strategy of carbon neutrality for the ...

The Latin America Energy Outlook, the International Energy Agency's first in-depth and comprehensive assessment of Latin America and the Caribbean, builds on decades of collaboration with partners support of the region's energy goals, the report explores the opportunities and challenges that lie ahead. It provides insights on the ways in which the ...

CRSS has picked LG Chem Resu batteries for the next generation of grid tied and off grid residential energy storage solution for our systems because of the performance, cost and warranty. These batteries will work with any DC or AC coupled inverter systems that have a high voltage (400V) or Low voltage (48V).

Read the latest news on solar energy in Costa Rica and world-wide, as well as research breakthroughs in solar technology. Introducing Costa Rica Solar Solutions and LG Chem Resu Energy Storage Partnership

Solar microgrids are energy generation and management systems that combine solar panels with energy storage, such as batteries, and an intelligent control infrastructure. These networks operate autonomously or are connected to the main grid, providing energy flexibility and stability. In Costa Rica, solar microgrids are becoming a popular ...

Largest innovative photovoltaic generation and energy storage project opens in Costa Rica. The system uses solar panels to charge batteries during periods of lower energy cost and then, subsequently to deliver stored energy during the two peak periods when cost is highest.

Ultimately, the team determined that a hybrid energy system that included on-site solar generation and battery energy storage would provide time-shifting capabilities to reduce energy costs and lower the facility's carbon emissions. Proquinal contracted with Rolls-Royce and solar developer Swissol to commission the project.

Smarter grid-connected microgrids leverage advanced technologies to optimize different generation sources, including wind, solar, and generators, along with the grid to offer customers the lowest combined cost of energy possible. These systems are programmed with your utility rate and use its advanced algorithm to avoid
