

ertex solar is a flexible team of specialists with 70 years of experience in glass construction. Our goal is to integrate solar technology into building architecture as harmoniously as possible. We produce and distribute solar modules for integration into buildings as a complete system, as well as individualised, customer-specific solutions.

ertex solar is a flexible team of specialists with 70 years of experience in glass construction. Our goal is to integrate solar technology into building architecture as harmoniously as possible.

ertex solar provides building integrated photovoltaic (BIPV) solutions for renewable buildings. Our solar panels produce electricity that can be integrated into facades, skylights, balcony rails and conservatories. Functions can be customised, depending to each installation of an insulated glass unit, brise soleil or overhead glazing.

At ertex solar, we see a future-oriented building envelope as a simultaneous source of energy - in a manner of speaking, a power plant in the facade. With unrivaled expertise in the fields of photovoltaics and glass construction, we transform facades and roofs into active, energy-generating surfaces.

ertex solar is a flexible team of specialists with 70 years of experience in glass construction. Our goal is to integrate solar technology into building architecture as harmoniously...

With ertex solar it is now possible to generate green solar electricity even under the most extreme conditions. In collaboration with experienced structural engineers and solution providers from the facade construction industry, an appropriate concept was elaborated for the Glocknerbahn in Zell am See, Salzburg.
