

The EU-funded INSULAE project aims to help islands find locally produced, sustainable and low-cost sources of energy. They will develop interventions linked to seven replicable use cases at three Lighthouse Islands (in Croatia, Denmark and Portugal).

The Cocos (Keeling) Islands are a group of 27 islands, and are composed of 2 atolls: North Keeling, and South Keeling. South Keeling consists of 26 islands in a horseshoe formation around a large lagoon (approximately 10 km across).

Islands all over Europe are accelerating their clean energy transition, and their stories are truly inspiring! The Clean energy for EU islands secretariat supports Europe's islands in their journey with technical support, capacity-building ...

Experts in island energy transition and financial instruments have joined forces to help island communities achieve efficient and sustainable energy solutions. This is in line ...

Islands all over Europe are accelerating their clean energy transition, and their stories are truly inspiring! The Clean energy for EU islands secretariat supports Europe's islands in their journey with technical support, capacity-building activities and networking opportunities.

The Energy Storage Coalition is campaigning for the European Commission (EC) to adopt an "Action Plan on Energy Storage", believes that regulatory clarity and encouragement are needed for member states to invest in storage.

In 2021 and 2022 the Clean energy for EU islands secretariat (the secretariat) conducted a study on the regulatory barriers affecting the clean energy transition of islands. This provided significant insights into the operation of the islands' electricity systems and formulated recommendations to overcome existing challenges.

The global soil organic carbon concentration map provides users with essential information on degraded areas and soil fertility as well as on the contribution to carbon storage mitigating ...

Interconnected islands are not the same as mainland grids. Interconnected island systems still need special, not market disruptive rulesfor: local renewable energy sources. energy efficiency ...

The latest International Energy Agency report highlights that global energy demand is increasing, rebounding following a brief dip during the COVID-19 pandemic in 2020, as shown in Fig. 1 (a). This trend is expected to continue, with the annual growth in global electricity demand rising from 2.6% in 2023 to an average of 3.2% in 2024-2025, surpassing the pre ...

Interconnected islands are not the same as mainland grids. Interconnected island systems still need special, not market disruptive rulesfor: local renewable energy sources. energy efficiency in power supply and demand. energy storage and smart systems. 2. Interconnections and Islands Clean Energy Transition

In 2021 and 2022 the Clean energy for EU islands secretariat (the secretariat) conducted a study on the regulatory barriers affecting the clean energy transition of islands. ...

Experts in island energy transition and financial instruments have joined forces to help island communities achieve efficient and sustainable energy solutions. This is in line with the EU's clean energy priorities.
