

France complete solar system for home price in

How much does a DIY solar panel cost in France?

The average price for a DIY kit including 16 panels is around EUR6,250. These are generally capable of producing 64,000Wh (watt crête, or 6.4 kWh), which is about 1.5x the power consumption of an average household in France.

Are solar panels a good investment in France?

As electricity prices continue to soar in France - up 60% in four years - more people are turning towards solar panel kits, which promise to help users save on energy costs and installation prices. The estimated extra cost of electricity in 2024, compared to 2020, is EUR540 per household per year.

How many solar panels are installed in France?

Solar panel installations are increasing in France with the last year seeing over 200,000 installations across the country as prices fell. This includes installations from both professionals and from DIY kits, which allow homeowners to set up the panels by themselves. Read more: [Why record numbers of homeowners in France are installing solar panels](#)

Can you have solar panels on a property in France?

Other rules may apply if your property in France is located in certain historic areas. Read more: [Can you have solar panels on homes in historic areas of France?](#) You will also need to contact Consuel for an Attestation de Conformité to confirm your installation is safe to be connected to the main power grid, which costs EUR180.

How much do DIY solar panels cost?

At any point if you are struggling it is advisable to contact a professional. DIY solar panel kits are around the price of purchasing the panels through an official company and having one of their electricians install them. The average price for a DIY kit including 16 panels is around EUR6,250.

Can you sell surplus energy if you have solar panels?

For example, you can only sell surplus energy if you have photovoltaic panels installed, as solar thermal panels do not directly produce electricity. Installation types can vary between off-grid and on-grid systems, and while some installations are on the roof, others will be on the ground in your garden.

The average purchase cost of a kWh is around 23 cents, while the average selling price is around 5 cents. So consuming your electricity rather than feeding it back into the grid can earn you up to 4 times more!
