

How much power does an electrolytic separator need?

Since Mechanism 7.1 (Minecraft 1.7.10) the Electrolytic Separator requires 400 joules of power per tick, or 160 FE per tick. Without upgrades, it performs 1 operation per tick. Notably, each speed upgrade doubles the operation speed of this machine, for 256 operations per tick with the maximum of 8 speed upgrades.

Does the electrolytic separator take energy upgrades?

Please note that while the Electrolytic Separator does take Energy Upgrades, they don't actually affect the machine's energy efficiency, for balancing purposes. Typically the first application of the Electrolytic Separator is in the electrolyzing of water into Hydrogen and Oxygen. Both have various uses within other recipes.

Should a gas separator be upgraded?

If not, and you have just speed, that'll do it. Also, depending on which machine they're pumping into, use the "gas" upgrade in that machine. It will upgrade the efficiency. Should use less of said gas that way, so the separator will not have to work as hard. Something's wrong there.

How does an electrolytic separator work?

The Electrolytic Separator separates water or brine into useful gases. The Electrolytic Separator requires a constant supply of power and must have a source of a suitable liquid in order to produce the gases. As the liquid is electrolyzed, the component gases will be stored in its internal tanks.

How does an electrolytic separator decompose water?

The Electrolytic Separator (middle) decomposes water, delivered by an Electric Pump on the right, into hydrogen and oxygen. The hydrogen is burned in a Gas-Burning Generator on the left. The Electrolytic Separator is used to separate Heavy Water into Deuterium and Oxygen, Brine into Sodium and Chlorine, and Water into Hydrogen and Oxygen.

Why is my electrolytic separator not giving more gas?

There is an issue that happens with multiple electrolytic separators where they start eating all of the power and not giving more gas. Try breaking them all and putting one at a time back down and turning it on, that has usually fixed it for me. I actually had this problem last night.

Upgrades can be added here, such as the Energy Upgrade to improve energy efficiency. Other possible upgrades include the Speed and Muffling Upgrades. The middle-right button opens the GUI to configure the access rights for the ...

During the investigation I discovered a discrepancy between the documentation and the observed behavior

concerning speed upgrades. The wiki ...

Try getting a bunch of energy upgrades into your electrolytic separator to reduce its energy usage/tick. Make sure you're dumping excess oxygen or using it so it doesn't stop hydrogen ...

Since Mechanism 7.1 (Minecraft 1.7.10) the Electrolytic Separator requires 400 joules of power per tick, or 160 FE per tick. Without upgrades, it performs 1 operation per tick. Notably, each speed upgrade doubles the operation speed of this machine, for 256 operations per tick with the maximum of 8 speed upgrades.

You just need to use speed and energy upgrades on both the separator and whatever you're pumping into. Then use gas upgrades on the machine you're pumping into. That fixed it for me.

Upgrades are essential to machines if you wish to improve them. Currently there are seven upgrades: Speed Upgrade; Energy Upgrade; Gas Upgrade; Muffling Upgrade; Filter Upgrade; Anchor Upgrade; Stone Generator Upgrade; To install an upgrade, the player can either use the machine's upgrade tab in its UI, or shift-use the upgrades on the machine.

"Electrolytic Separator" does accept "Energy Upgrades" but if you put some in the power consumption don't sink. Steps to reproduce: Tase "Energy Upgrades" in inventory and open "Upgrade"-GUI at "Electrolytic ...

Try getting a bunch of energy upgrades into your electrolytic separator to reduce its energy usage/tick. Make sure you're dumping excess oxygen or using it so it doesn't stop hydrogen production. Potentially add both upgrades to your separator, keeping them 1:1 will directly increase efficiency however it will increase total power and water usage.

"Electrolytic Separator" does accept "Energy Upgrades" but if you put some in the power consumption don't sink. Steps to reproduce: Tase "Energy Upgrades" in inventory and open "Upgrade"-GUI at "Electrolytic Separator";

Separators use high amounts of energy, especially when upgraded, to avoid an infinite energy exploit by feeding the Hydrogen from water to a Gas-Burning Generator. If you have no better use for the Hydrogen, it's still a good use for ...

Separators use high amounts of energy, especially when upgraded, to avoid an infinite energy exploit by feeding the Hydrogen from water to a Gas-Burning Generator. If you have no better use for the Hydrogen, it's still a good use for it, but add a buffer tank between the separator and generator for refueling jet packs and flamethrowers.

During the investigation I discovered a discrepancy between the documentation and the observed behavior

# Guinea electrolytic separator energy upgrade

concerning speed upgrades. The wiki (<https://wiki.aidancbrady/wiki/Upgrades>) says that power consumption should go up by a factor of 100 (for a 10 times speed increase) when 8 speed upgrade cards are used. It also ...

Since Mekanism 7.1 (Minecraft 1.7.10) the Electrolytic Separator requires 400 joules of power per tick, or 160 FE per tick. Without upgrades, it performs 1 operation per tick. Notably, each speed upgrade doubles the operation speed ...

Upgrades can be added here, such as the Energy Upgrade to improve energy efficiency. Other possible upgrades include the Speed and Muffling Upgrades. The middle-right button opens the GUI to configure the access rights for the machine. The lower-right button changes the Electrolytic Separator's behavior to Redstone:

Upgrades are essential to machines if you wish to improve them. Currently there are seven upgrades: Speed Upgrade; Energy Upgrade; Gas Upgrade; Muffling Upgrade; Filter Upgrade; Anchor Upgrade; Stone Generator Upgrade; To ...

The energy upgrade upgrade allows you to increase the power storage capacity of a Mekanism machine which has an upgrade slot, as well as reduce its power consumption. Crafting Recipe v

The Electrolytic Separator, when separating Water into Hydrogen and Oxygen gas, does not respond to Energy Upgrades. Other machines do. The Electrolytic Separator is being powered by Advanced Universal Cable, if that matters.
