Mawson Peak on Heard Island is the highest Australian mountain (at 2,745 meters, it is taller than Mt. Kosciuszko in Australia proper), and one of only two active volcanoes located in Australian territory, the other being McDonald Island; in 1992, McDonald Island broke its dormancy and began erupting; it has erupted several times since, most ...

This study shows that volcanic emissions from Heard Island resulted in increased atmospheric loading of bioavailable Fe around and up to 500 km downwind from HIMI.

I had a Growatt AC coupled system fitted last week with 6.5kWh battery. It was a steal compared to other systems. Everything seems to be working well. Took a little bit of fiddling with the iBoost to get them working together (changed iBoost to 200w export threshold) but other than that it's working as expected.

Heard Island and the McDonald Islands are free from introduced predators and provide crucial breeding habitat in the middle of the vast Southern Ocean for a range of birds. The surrounding waters are important feeding areas for birds and some scavenging species also derive sustenance from their cohabitants on the islands.

The Heard Island and McDonald Islands group was formed by the plume type of volcanism, a process that is poorly understood in comparison with the earth's other two main volcanic types - subduction and seafloor spreading. This feature of the group offers an extraordinary view into the
