

The Heard Island and McDonald Islands (HIMI) are remote, pristine, and ecologically significant sub-Antarctic islands located in the Southern Ocean. [...]

Heard Island and the McDonald Islands are free from introduced predators and provide crucial breeding habitat in the middle of the vast Southern Ocean for a range of birds. The surrounding waters are important feeding areas for birds and some scavenging species also derive sustenance from their cohabitants on the islands.

The wind and solar PV capacities in the Transforming Energy Scenario in 2030 in this report are slightly higher than the estimates presented in IRENA's reports (IRENA, 2019c; 2019d) which consider developments as of the third quarter of 2019.

Overview Wildlife History Geography Administration and economy See also Further reading External links The islands are part of the Southern Indian Ocean Islands tundra ecoregion that includes several subantarctic islands. In this cold climate, plant life is mainly limited to grasses, lichens, and mosses. Low plant diversity reflects the islands' isolation, small size, severe climate, the short, cool growing season and, for Heard Island, substantial permanent ice cover. The main environmental deter...

VPP4Islands is a 4-year project aiming to smoothen the integration of renewable generation systems, promoting the transition to a smarter and cleaner energy, and to help islands exploiting different approaches in energy efficiency and innovative storage.
