Kenya google sunroof project

What is Project Sunroof?

Project Sunroof puts Google's expansive data in mapping and computing resources to use for people and organizations interested in solar power, helping illustrate the potential of solar power for a single house, and with the introduction of the data explorer, the potential of solar for zip codes, cities, counties and states.

Does Project Sunroof have solar data?

We currently have solar data for portions of 50 states and Washington DC. See if we've got you covered. Project Sunroof is a solar calculator from Google that helps you map your roof's solar savings potential. Learn more, get an estimate and connect with providers.

Does Google have a solar project?

Google has previously invested in projects with solar energy provider,SolarCity. While the solar insights provided by Project Sunroof were initially used to support individual rooftop solar insights,additional uses for the data have been developed by Google.

What is sunroof & how does it work?

Initially launched to drive consumer awareness and education, the service now also makes it easy for interested homeowners to connect with solar providers in their area. Sunroof covers 43 million rooftops in the U.S. -- which is more than 50% of all households -- and in the coming months will be available in all 50 states.

How much data does sunroof process?

Sunroof processes roughly 1 petabyte(1,000 terabytes) of data: height and color for 43 million homes; weather information; about 1,000 state and local incentives; and hundreds of local electricity rates. Over the past 3 years,Sunroof has grown from a part-time project to a full-time job for Elkin and his team.

Will a solar roof service be available in the United States?

So far,the roof exposure to the direct sun can be analyzed by citizens of Boston,the San Francisco Bay area and Fresno. If the prediction turns out to be correct,the service might be available all over the U.S. rather soon,with potential to be spread worldwide.

Project Sunroof computes how much sunlight hits the roof taking into account Google"s database of aerial imagery and maps, 3D roof modeling, shadows cast by nearby structures and trees, all possible sun positions over the year, historical cloud and temperature patterns that might affect solar energy production.

Explore estimated solar potential of your community. Updated total solar potential data for cities and regions around the world available in the Environmental Insights Explorer (EIE) . Simply ...

Kenya google sunroof project

Google wants to make installing solar panels easy and understandable for anyone. Project Sunroof puts Google"s expansive data in mapping and computing resources to use, helping calculate the best solar plan for customers. Project ...

Project Sunroof computes how much sunlight hits the roof taking into account Google"s database of aerial imagery and maps, 3D roof modeling, shadows cast by nearby structures and trees, ...

Using high-resolution 3D imagery data from Google Maps to calculate shadows from nearby structures and trees and taking into account historical weather and temperature patterns, the Project Sunroof website calculates how much money a user can expect to save yearly by making use of solar power. [1]

Join us as we unveil the potential of Google Solar Map and Project Sunroof, where sunlight becomes a navigational beacon of sustainability and renewable energy. What is Project Sunroof? Project Sunroof is an innovative initiative by Google that aims to accelerate the adoption of rooftop solar energy.

Project Sunroof puts Google"s expansive data in mapping and computing resources to use for people and organizations interested in solar power, helping illustrate the potential of solar power for a single house, and with the introduction of the data explorer, the potential of solar for zip codes, cities, counties and states.

Aims to make the process of installing solar panels easier and more understandable for anyone, by putting Google"s expansive data in mapping and computing resources to use

Project Sunroof primarily works to encourage the private adoption of solar energy by providing a set of tools to facilitate the purchase and installation of solar panels. Using high-resolution 3D imagery data from Google Maps to calculate shadows from nearby structures and trees and taking into account historical weather and temperature patterns, the Project Sunroof website calculates how much money a user can expect to save yearly by making use of solar power. In addition, th...

Explore estimated solar potential of your community. Updated total solar potential data for cities and regions around the world available in the Environmental Insights Explorer (EIE) . Simply enter a state, county, city, or zip code to see a solar estimate for the area, based on the amount of usable sunlight and roof space.
