

The solar resource map is an interactive map available to all via the website. It allows users to easily and effectively identify, for every roof in Monaco, the potential solar resource, the exploitable area on which photovoltaic panels could be installed, and possible annual electricity production.

During a press conference held late in the morning on Thursday 29 June, Marie-Pierre Gramaglia, Minister of Public Works, the Environment and Urban Development, presented two aspects of Monaco's investment in solar power: a solar resource map for the Principality and the launch of a joint venture by the Prince's Government and SMEG to ...

Situés en Côte d'Or, en Haute Vienne, dans les Landes et le Gard, ils totalisent une production de 65 000 MWh / an, soit environ 12% de la consommation électrique de la Principauté de Monaco. Fin 2021, ce sont donc 15 parcs photovoltaïques que M.E.R. portera ...

"The facilities, which are located in Côte-d'Or, Haute-Vienne, Landes and Gard, will generate a total of 65,000 MWh per year, or around 12% of the Principality of Monaco's electricity consumption." By the end of 2021, M.E.R. will own 15 photovoltaic power stations.

This website is an interactive map that allows users to easily identify every roof in Monaco, its potential solar resource, the exploitable area on which photovoltaic panels could be installed, and the possible annual electricity production.

A giant solar power station has been inaugurated on the roof of Monaco's Grimaldi Forum, marking a significant milestone in the Principality's energy transition. Eventually, electricity generated from the station will be used to power the new eco-district.

The majority of solar installations in Monaco are on-grid systems, primarily comprising rooftop solar panels on residential and commercial buildings. A diverse range of structures throughout the Principality have adopted rooftop solar, including schools, churches, the Fontvieille fire station, and various office and residential buildings.

Since 2005, Monaco has remained steadfast in its commitment to undergo sustainable development. It started with the installation of solar roofs in residential and commercial properties. Aside from installing solar panels on the roofs, Monaco has also used heat pumps in order to generate energy since 1960.

Monaco solar grid system

In line with this objective, Monaco Energies Renouvelables has just acquired eight photovoltaic parks, with a total production capacity of 39 MWpeak, located in seven Departments in the south of France.
