Solar Panels: The foundation of solar energy containers, these panels utilize photovoltaic cells to convert sunlight into electricity. Their size and number vary depending on energy requirements and sunlight availability.

What is a solarcontainer?

The Solarcontainer is a photovoltaic power plant that was specially developed as a mobile power generator with collapsible PV modules as a mobile solar system, a grid-independent solution represents. Solar panels lay flat on the ground. This position ensures maximum energy harvest Panels lays flat on the ground.

What is a solar power meter?

A solar power meter is a device that measures solar power or sunlight in units of W/m^2 , either through windows to verify their efficiency or when installing solar power devices. Solar meters accumulate PV yield production and local energy consumption to monitor and analyze PV plant performance.

How does solar metering work?

When you install solar, the original meter gets replaced with a bi-directional (or 'Buy/Sell') meter. This bi-directional meter is what makes net metering possible by measuring solar energy production as well as any electricity that you are also buying from the utility company .
