Could single-Material solar cells be the future of solar energy?

The work -- published in the journal Nature Materials -- could have a huge impact on the future of solar energy and electronics by enabling the development of single-material solar cells.

Can organic conductors be fabricated?

One of the major costs is the transparent conducting electrode, which is used to extract the electrical charge from the solar cell. Recently, new organic conductors have been reported with the potential to be fabricated using low-cost, industrially scalable techniques.

Are organic semiconductors scalable?

The versatility of organic semiconductors, capable of delivering high performance, is both a strength and a challenge for scaling. It is difficult to identify widely available transport layers that are compatible, scalable and stable across different photoactive materials.

Prof. Henry He YAN's research team has discovered a novel material system that would revolutionize the future development of Organic Solar Cells (OSCs). It was published in Nature ...

A rational molecular and device design by PolyU scientists enable 20% efficiency in organic solar cells To make organic solar cells (OSC) ...

Associate Professor Feng He (Chemistry) has led his research group to make crucial breakthroughs in designing and synthesizing high-performance non-fullerene acceptors for the development of organic ...

Tired of greenhouse energy panic? Discover how BESS Container for EU Greenhouses turns solar watts into year-round power--slashing natural gas use by 55%, hitting 70% self-sufficiency, and nailing EU ...

A team of researchers led by Professor Philip C.Y. Chow from the Department of Mechanical Engineering at the University of Hong Kong (HKU) has made a breakthrough in the field ...

Scientists at the National University of Singapore (NUS) have demonstrated a perovskite-organic tandem solar cell with a certified world ...

Precisely controlling bulk heterojunction (BHJ) morphology through molecular design is one of the main longstanding challenges in developing high-performance organic solar cells (OSCs). ...

Nat. Mater. Soochow University's Yaowen Li & Yongfang Li Team: Organic Solar Cells with 20.82% Efficiency and High Thickness Tolerance & Stability Through Crystallization Sequence ...

Professor team organic solar container

University of Toronto: Lectures at the Leading Edge series Professor Tim Jones, University of Warwick; Organic Thin Film Solar Cells; February 6, 2013 Abstract: ...

Avoiding critical materials, we focus on organic solar cells and perovskite-inspired materials. Our unique expertise is the fabrication of efficient and stable organic light-harvesting layers from aqueous or ...

Prof. Gang LI's research team published a paper "Rational molecular and device design enables organic solar cells approaching 20% ...

The development of organic and perovskite solar cells has seen significant advances in materials innovation, power conversion efficiencies ...

Prof. Shuxiang Dong's Group from Shenzhen University and Prof. Kailiang Ren in Chinese Academy of Sciences have made important progress in the study of multi-physical field collaborative organic ...

Recently, Professor Kan Zhipeng's team from the School of Physical Science and Technology of GXU has made significant progress in the field of double-layer organic photovoltaic cells.

Recently, Professor Feng He's group from the Southern University of Science and Technology (SUSTech) made advances in device architecture, polymer photovoltaic materials, and the interface ...

Prof. Gang LI's research team published a paper "Rational molecular and device design enables organic solar cells approaching 20% efficiency" on Nature Communications on 28 February ...

The research team synthesized the first high-performance polymer donor material based on a novel thiophene derivative FE-T and achieved a remarkable power conversion efficiency ...

Solarcontainer is a mobile solar solution powering 32-50 homes with up to 140kWp. Innovative, efficient, and portable renewable energy.

A comprehensive overview of the latest research progress of the high-performance large-area organic solar cells (OSCs), including coating techniques, material ...

1. Organic Photovoltaics Organic semiconductors are envisioned to positively impact human life through applications ranging from sensors and displays to lighting and photovoltaics. As opposed to most of ...

New-generation photovoltaic techniques with low-cost solution-processability, including organic solar cells, organic-inorganic nanocrystals hybrid solar cells, and perovskite solar...

The team of researchers, led by Associate Professor He Feng from the Department of Chemistry at SUSTech, had been investigating the polymer donor materials of non-fullerene bulk ...

Professor team organic solar container

The main focus of our research is on organic photovoltaics, and in case you are wondering what "organic photovoltaics" or often also called "organic solar cells" ...

Institute of Optoelectronic Materials and DevicesInstitute of Optoelectronic Materials and Devices was established in 2018, working in the fields of low-cost preparation of high-efficiency ...
