How much power does Saudi Arabia need?

Saudi Arabia has established a goal to source at least 50 percent of its power from renewable energy by 2030, expanding its capacity to 130 gigawatts (GW), 58.7 GW of which is expected to come from solar and 40 GW from wind. This target is the most ambitious of its kind among Gulf Cooperation Council (GCC) countries (Figure 1).

How is Saudi Arabia developing its solar energy sector?

1. Saudi Arabia has initiated the National Renewable Energy Program (NREP) to develop its solar energy sector, with several projects in progress, including a 600 MW capacity project. 2. Large-scale projects such as Sakaka solar Independent Power Producer (IPP) (300 MW) and Dumat Al Jandal wind project (400 MW) were part of the first bidding process.

Will Saudi Arabia invest \$270 billion in low-carbon energy projects?

Saudi Arabia has declared its intention to invest \$270 billion in low-carbon energy projects by the year 2030. Table 3 shows major investment projects in Saudi Arabia for energy transition. Table 3. Overview of major investments in Saudi Arabia's energy transition and RE initiatives RE = renewable energy; SAR = Saudi Riyals.

Why does Saudi Arabia rely on oil?

According to the EIU editorial director, the Saudi economy's reliance on oil is emphasised because petroleum products comprised almost two-thirds of the country's energy mix in 2022, contributing to nearly 80% of export earnings and 68% of government income.

Why is Saudi Arabia transitioning to independent power and water projects?

Saudi Arabia is transitioning towards independent power and water projects to address the escalating power requirements and broaden the array of energy sources via the National Renewable Energy Program. This will be accompanied by a substantial rise in non-oil government income and the private sector's contribution to GDP. 1.

Will Saudi Arabia produce 50 gigawatts of wind energy by 2030?

The Kingdom has set a target of producing 50 gigawatts of wind energy capacity by 2030. In 2021, Saudi Arabia inaugurated its first commercial-scale wind farm, the 400-megawatt Dumat Al-Jandal project, which is currently the largest in the Middle East. Additional large-scale wind projects are in the pipeline.

According to Nicolas Daher, the EIU's lead energy analyst, Saudi Arabia "currently generates almost all of its electricity from fossil fuels, of which 60% comes from natural gas and about 40% from oil". By 2030, it aims
