

Since 2007, the Slovenian Photovoltaic (PV) Portal has been providing information on solar energy in the Slovenian language. It is the only place where you can find a list of all solar power plants in Slovenia in one place, find basic information on the individual building blocks of solar power plants and find out about new developments.

BISOL Group is Solar company - a European PV manufacturer passionate about the highest industry standards into top quality solar products. A complete range of their PV modules, PV mounting solutions and other solar solutions and services can be found in ...

Hydropower plant operator Hidroelektrarne na spodnji Savi (HESS) has officially opened Slovenia's biggest solar power plant, with an installed capacity of 6 MW. Together with the Brezice hydropower plant, it makes a hybrid system. At the same time, Brezice's water reservoir will provide energy storage.

The rules, introduced by a government regulation, also set out where it is possible to set up solar power plants. These will be allowed on existing buildings, facades, balconies and car parks regardless of their size as well as in the wide areas of roads, railways, electricity production facilities and landfills.

Since 2007, the Slovenian Photovoltaic (PV) Portal has been providing information on solar energy in the Slovenian language. It is the only place where you can find a list of all solar power plants in Slovenia in one place, find basic ...

In 2020, a total of 11,990 solar power plants with a total electrical capacity of 371.6 MW were installed. Their production in the same year amounted to 289.5 GWh or about two percent of the total electricity production in Slovenia. This energy is sufficient to cover just under nine percent of Slovenian household electricity needs. Solar energy ...

In 2019 Slovenia installed 2,496 solar photovoltaic systems with a total capacity of 31.2 MW of which the vast majority is for self-consumption. Compared to 2018 this is an increase of 233%. The growing number of prosumers in Slovenia mirrors the trend in Europe.

The Slovenian government is gearing up to increase solar energy production, with Prime Minister Robert Golob announcing a plan to set up giant solar power plants to supply households in the...

Slovenia offers great potential for exploiting photovoltaic energy due to evenly spread solar irradiation. The first photovoltaic power plant in Slovenia was set up in 2001. At the end of 2017, 4,231 photovoltaic power plants had been installed in Slovenia with a ...

Slovenia electric solar panels

Slovenia could potentially add 258 MW of new solar capacity in 2022, according to new figures from the Slovenian Photovoltaic Association (SPA). The country installed 194 MW of solar in the...

emissions from renewable power is calculated as renewable generation divided by fossil fuel generation multiplied by reported emissions from the power sector. This assumes that, if renewable power did not exist, fossil fuels would be used in its place to generate the same amount of power and using the same mix of fossil fuels. In countries
