

What is a solarcontainer?

The Solarcontainer is a photovoltaic power plant that was specially developed as a mobile power generator with collapsible PV modules as a mobile solar system, a grid-independent solution represents. Solar panels lay flat on the ground. This position ensures maximum energy harvest. Panels lay flat on the ground.

Where can a solar container be used?

Possible locations are therefore remote villages, development and crisis areas, mining, venues or deployments in extreme weather events. In order to be able to use the high PV output when there is limited sun exposure, the solar container can also be used in combination with an energy storage device.

What is a special container & how does it work?

The special container only functions as a transport, packaging and security unit for the largely pre-assembled photovoltaic system. In this way, the shell of the solar panels is completely unfolded.

How many households can a solar Container Supply?

Based on an average power consumption of a 4-person household of 4000 kWh per year and a location in Southern Germany, the solar container can supply approx. 32 households with climate-friendly electricity. At a location in Southern Europe it can even be up to 50 households due to the high solar radiation.

Can a solar container be used as a power generator?

In order to be able to use the high PV output when there is limited sun exposure, the solar container can also be used in combination with an energy storage device. Especially in completely self-sufficient applications, diesel aggregates are often used as power generators.

How many installers does a solarcontainer need?

At least 3-4 installers and 1 crane operator are needed to put the Solarcontainer into operation within one day.
