

Solara energy Spain

Spain has embraced various solar technologies, including photovoltaic (PV) systems, concentrated solar power (CSP), and solar thermal energy. PV systems dominate the market due to their versatility and decreasing costs, while CSP installations harness solar energy for large-scale electricity generation.

The Spain Solar Energy Market is expected to reach 34.49 gigawatt in 2024 and grow at a CAGR of 15.96% to reach 72.32 gigawatt by 2029. The Red Eléctrica Group, COBRA Group, Solaria Energia y Medio Ambiente SA, Acciona S.A. and Iberdrola S.A. are the major companies operating in this market.

At the beginning of 2024, PV solar's installed capacity in Spain was almost 28,000 MW, according to data from Spain's Red Eléctrica. However, the use of the sun as a renewable energy source in Spain dates back to the 1980s.

Solar energy use in Valencia. In 2021, Spain became the seventh best-performing country in the world for extensions to solar power capacity. This exponential growth looks set to continue, as...

Spain is poised to become a major contributor to Europe's renewable energy landscape, supported by its robust solar potential and favorable market conditions. In 2023, Spain is on track to increase its solar capacity by 4 GW.

Solar energy has experienced a boom in Spain in recent years, so much so that the government has been forced to regulate self-consumption grids. According to a Euronews report, Spain is now ranked behind the Netherlands and Germany as the country with the third highest rate of electricity coming from solar energy.

In 2023, installed solar photovoltaic power increased by 28%, bringing an additional 5,594 MW to the Spanish generation pool, the highest figure since records began. As a result, this technology now has 25,549 MW in service, representing 20.3% of the total Spanish energy generation pool.

The amount of solar photovoltaic energy generated in Spain up to 5 October 2024 was more than all the energy registered in 2023, according to data provided by Red Eléctrica. Last Saturday, this renewable technology reached 37,551 GWh, a figure that is higher than the 37,472 GWh recorded last year and which was itself a historical record.

We are a leading company in the generation of solar photovoltaic energy, 100% renewable and sustainable. We have a pipeline of more than 14,200 MW in southern Europe and aim to reach 18 GW by 2030
