

St Kitts and Nevis off grid energia solar

Does St Kitts and Nevis have a national energy policy?

Yes, St. Kitts and Nevis has a National Energy Policy (NEP). The key provisions of this policy include connecting large-scale independent power providers and many distributed renewable energy systems to the electrical grid. Not all generation is made publically available; this chart provides known and referenceable data.

How much solar energy does St Kitts use?

In St. Kitts and Nevis, the solar resource averages 5 kWh per square meter. Solar energy is already being used for grid-powered induction lighting and street lights along roadways. A 7 MW waste-to-energy power plant is planned to come online on St. Kitts in 2015.

How much does electricity cost in St Kitts & Nevis?

The electricity rates in the Federation of St. Christopher (St. Kitts) and Nevis are \$0.26 per kilowatt-hour (kWh). This is lower than the Caribbean regional average of \$0.33/kWh.

How much energy is lost in St Kitts & Nevis?

Reports indicate that in St. Kitts and Nevis, higher losses are largely attributable to nontechnical losses such as unmetered consumption, leading to losses that are higher than the U.S. Energy Information Administration's average transmission and distribution loss of 6%. By comparison, the U.S. Energy Information Administration reports an average transmission and distribution loss of 6%.

What is the largest solar project in the Caribbean?

In September 2019, the Federal Government in collaboration with SKELEC signed an agreement with Leclanché SA - one of the world's leading energy storage companies based in Switzerland - to construct the largest solar generation and energy storage project in the Caribbean.

St Kitts has installed capacity of 43 mW and Nevis 13.4 mW but government has plans for a further 70 mW. The airport has a 1 mW solar farm and the government estimate a potential 16mW of solar power at a rate of 5 kWhrs per m² over the whole island.

At a brief but historic ceremony on Wednesday, June 15, 2022, to kick off the SOLEC Leclanché Solar Farm, Jomo Williams, General Manager of the St. Kitts Electricity Company (SKELEC), hailed the initiative a significant step towards achieving clean renewable energy for the Federation.

The solar project on St. Kitts will be oversized, allowing a portion of that electricity to meet current electric demand on the island, and the remainder to charge the large-scale battery storage system to meet island ...

demand on the island, and the remainder to charge the large-scale battery storage system to meet island demand after the sun sets.

On successful completion of this fully integrated solar photovoltaic system and a lithium-ion battery energy storage system (BESS), the facility will supply Saint Kitts with 30% to 35% of consumers' annual electricity demand by utilizing sustainable and renewable solar energy with ZERO carbon emissions.

The solar PV will supply St. Kitts with 30 - 35% of the annual electricity demand utilising sustainable, solar energy with zero emissions. The solar and storage system will replace over 4,000,000 gallons of diesel per year.

Kelly Construction is responsible for constructing the 2-bedroom 2-bathroom traditionally designed hardwood cabin neatly tucked away on the Liamuiga Natural Farm property located in the forest region of Phillip's in St. Kitts. When completed, the cabin will boast a fully off-the-grid solar PV system with two (2) arrays.

...

Construction has begun on a solar-plus-storage project on the Caribbean island of St. Kitts & Nevis, backed by Leclanché, Solrid and MPC Energy Solutions. The launch of the SOLEC power plant is nearly 18 months later than expected with the start of construction first announced back in December 2020, covered by Energy-Storage.news.
