What is a solarcontainer?

The Solarcontainer is a photovoltaic power plant that was specially developed as a mobile power generator with collapsible PV modules as a mobile solar system, a grid-independent solution represents. Solar panels lay flat on the ground. This position ensures maximum energy harvest. Panels lay flat on the ground.

What is solar thermal energy storage?

Sensible and latent thermal energy storage systems efficiencies over 90%. Solar thermal energy storage is considered one of the key technologies for overcoming the intermittency of solar energy and expanding its applications to power generation, district heating and cooling, and industrial heat supply.

Why do petroleum companies use mobile solar containers?

Petroleum companies often operate in distant locations with limited access to grid power. This is where a mobile solar containers can act as an additional power source to run the equipment. Good choice for disaster reliefs whenever it is important to deliver electricity as quickly as possible.

Should thermal energy storage projects be subsidized?

Subsidies or tax benefits applicable to thermal energy storage projects will be needed to accelerate the market. Environmental barriers generally exist more for underground thermal energy storage systems, affecting hydrological, thermal, chemical, and microbiological parameters.

What is a solar container?

Our Solar Containers are designed in a way to maximize ease of operation. It's not only meant to transport PVs but also to unfold them on site. It is based on a 20' sea container. The efficient hydraulic system helps quickly prepare the Solar to work. Because of their construction, our containers offer unmatched flexibility and mobility.
