What are the opportunities for long-duration energy storage in developing countries?

Developing countries present enormous market opportunities for innovative long-duration energy storage technologies that can support the integration of greater shares of variable renewable energy into weak power grids, replace diesel generators, and provide seasonal balancing.

What is long-duration energy storage (LDEs)?

Anyone you share the following link with will be able to read this content: Provided by the Springer Nature SharedIt content-sharing initiative Long-duration energy storage (LDES) is a key resource in enabling zero-emissions electricity grids but its role within different types of grids is not well understood.

Why is the energy sector stagnating in Venezuela?

The energy sector in Venezuela has fallen into a phase of stagnation - or regression - due to the mismanagement of resources and an intense policy of subsidies with political aim. As a result, in 2014 the country reported to have a fiscal breakeven point of more than 100 \$/bbl (Black gold deficits, 2014), one of the highest in the world.

How much does solar PV cost in Venezuela?

In 2001, the Venezuelan Ministry of Energy and Mines estimated the unitary costs for solar PV to be in the range of 0,23 USD/kWh and 0,52 USD/kWh, and for wind power between 0,06 USD/kWh and 0,1 USD/kWh.

How much does Venezuela spend on fossil fuels?

In the case of the Venezuelan energy sector, the IEA estimates that in 2017 the total fossil-fuel consumption subsidies in Venezuela rose to become one of the highest in the world at nearly USD 16,3 billion, which corresponds to around 8% of the country's GDP.

Can Corpoelec shape the future of the electricity sector in Venezuela?

In this sense, Corpoelec has the opportunity to shape the future of the electricity sector in Venezuela by assuming an active role in the energy transition journey, rather than being a passive passenger.

The state recently announced a first-of-its-kind request for a cumulative 500 megawatts (MW) of long-duration energy storage in projects that support at least eight hours of storage. These types of projects will benefit ...

Lower exports have in turn led to an increase in the storage capacity usage, which at peak can hold less than 40 MMbbl. "As for natural gas, there were some promising projects announced to develop Venezuela's vast offshore reserves.
