How does solar energy work?

Solar energy works by converting sunlight into electrical energy. This can be done through photovoltaic (PV) panels or through mirrors that concentrate solar radiation. The amount of sunlight that strikes the earth's surface in an hour and a half is enough to handle the entire world's energy consumption for a full year.

How do solar panels work?

While individual solar cells can generate electricity on their own, they are typically assembled together into a solar panel for increased power output. A standard solar panel consists of a series of interconnected solar cells enclosed in a protective glass casing that offers durability and allows sunlight to reach the cells.
